

# EPSTEIN ABDOMINOPLASTY RETRACTOR

As the trend in today's abdominoplasties is towards less upper lateral undermining, the upper tunnel has become narrower. During the dissection of this tunnel, it is difficult to maintain countertraction with available instrumentation. The Epstein abdominoplasty retractor was designed to assist in the performance of the dissection of the upper abdominal tunnel. The ergonomic handle is easy to hold. It is available in several blade lengths so as to best fit the anatomy of the patient: whether the tunnel is long or short, there is a retractor to provide the best mechanical advantage in yielding exposure and reduce fatigue. The widened, curved working end spreads the tissues of the upper skin flap apart as the teeth gently hold them in place without slippage. The leading edge of the dissection is easily seen and maintained, facilitating cautery elevation of the skin flap from the muscle fascia. The retractor is also extremely helpful in elevating the narrow tunnel so that the underlying muscle fascia can be plicated.

- Designed to assist in the performance of the dissection of the upper abdominal tunnel
- Extremely helpful in elevating the narrow tunnel
- The wide curved working end spreads and holds the tissue of the Upper Skin Flap apart
- Facilitates cautery elevation of the skin flap from the muscle fascia
